The following information is available in this documentation file:

Introduction
Minimum System Requirements
Contus Vblog! Features
Installation & Activation
Configuring Contus Vblog!
Video blogging with Contus Vblog!
Vblog! Support Team.

Introduction

Thank you for choosing Contus Vblog for your Wordpress blog/website.

Why Vblog? (Video blogging in seconds)

Bored with posting texts, pictures and embedded videos? Do you like to do something new? It's your Blog, so build it however you want.

Contus Vblog plugin allows you to record videos directly when you post blogs. It has in-built Contus WebFlvRecorder. When you post, you can see the button "Add Video Post" at top right of you editor. You can record live videos with your webcam and post directly.

You don't even need to wait for the video to go live to view the video. You can view the preview of recorded video when recording itself and then you can decide whether to post the video or re-record.

You can also allow your blog readers/visitors to post video comments for your post.

Where is Vblog going?

Contus Support has ambitious plans for expanding the use of Contus Vblog for Wordpress and we always welcome new ideas, feature requests from our clients/users. Vblog recorder will be updated whenever we update features of WebFlvRecorder. We strongly believe that Video Blog will definitely encourage blog owners to give more post and the visitors to enjoy listening to the video post rather than reading.

Once you install the plugin, all the settings for Video blogging and Video comments would be available in admin panel. We also customize the plugin according to the blog owners need.

Minimum System Requirements

- Contus VBlog requires Red5 or FMS to record and store the videos.
- Please check with your hosting account provider for the availability of Red5

Contus Vblog! Features

Easy to setup Video Blog on Wordpress

- Can be installed on any Wordpress template
- Record your speech / video post online using our Web FLV Recorder (From your webcam)
- Play back the video before you publish
- Rerecord the video using Web FLV Recorder if you are not satisfied with the video recorded
- Related video post below the original video post
- Video comments is available for the users to post video comments
- Option to have HD FLV Player as the default player for your Video Blog

Installation & Activation

Please download Contus Vblog! File from <http://www.contussupport.com/wordpress-video-blog.php>

After you download Contus Vblog package, you need to change file path on two XML files and you need to replace default logo by your logo.

XML file path one:

Open “Contus-VBlog” package. → Open “config” xml file.

XML file path two:

Open “Contus-VBlog” package → open “xml” folder→ “config” xml file.

On both of files, you need to change the URLs “<http://www.yourdomainname.com>” to your real domain name.

Example:

If your domain name is “<http://www.google.com>”, you need to replace “<http://www.yourdomainname.com>” by “<http://www.google.com>” for the entire cofig.xml files.

Logo path:

Open “Contus-VBlog” package → open “images” folder→ “logo.png”

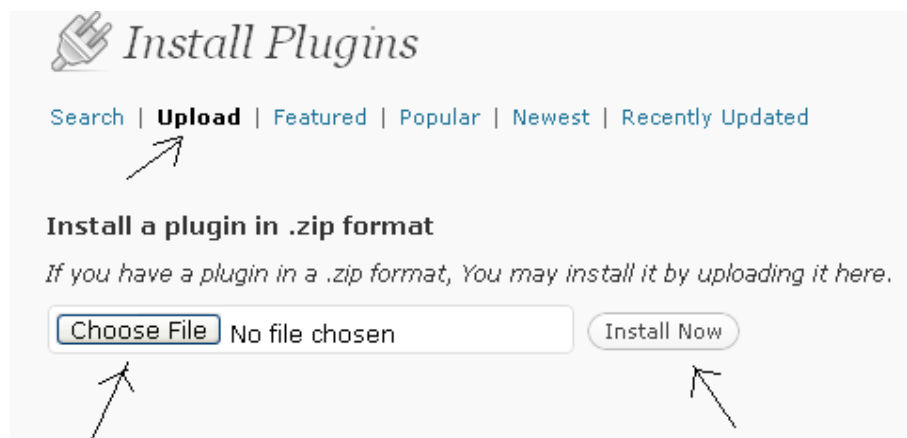

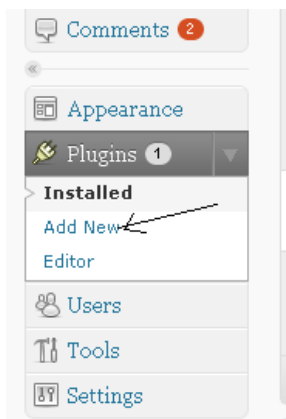

You need to replace the default “logo.png” by your “logo.png”.

Note:

Your logo should be in .png format and you need to name your logo as “logo”. So, your logo becomes logo.png.

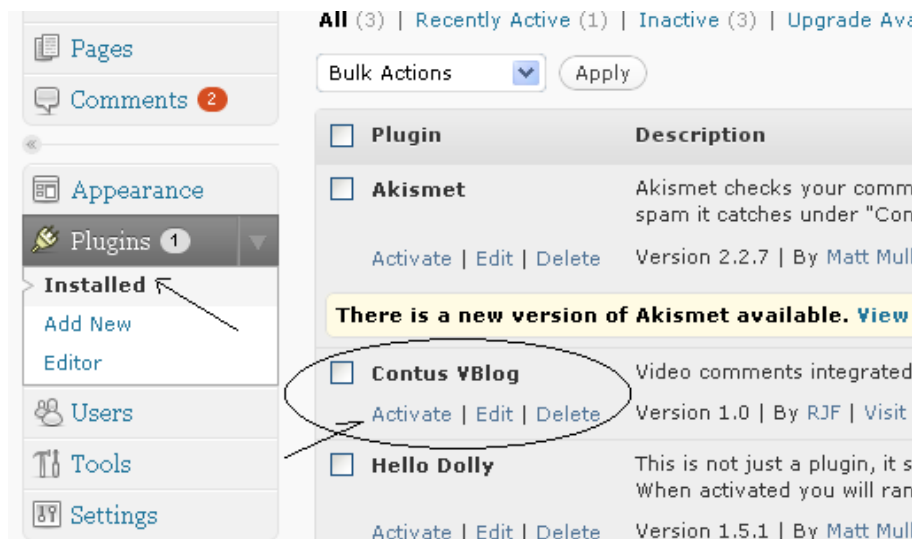

Now, your plugin is ready to install.

- Log on to Wordpress! Administration page.
- Plugin → Add new → Upload → Choose file.
- Select downloaded Contus Vblog! and click Upload File and and Activate after successful upload.

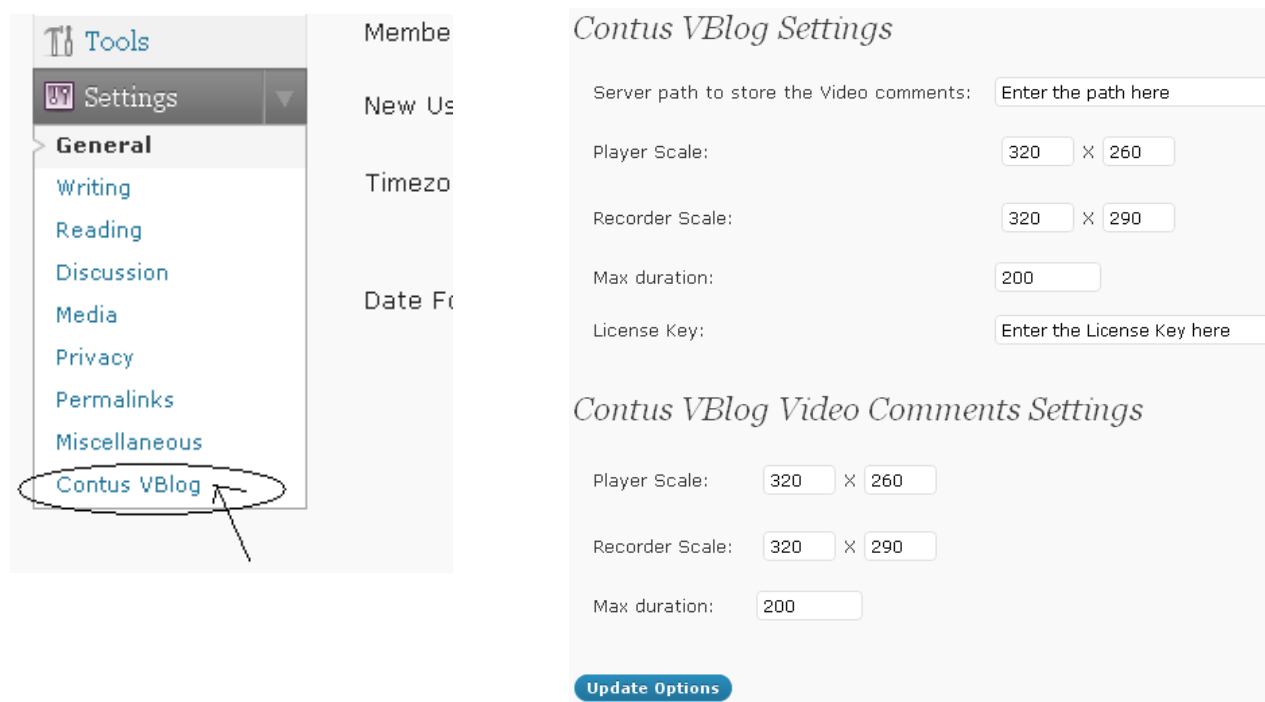

After installation, you need to activate plugin.

You can also activate plugin by visiting Plugin → Installed.

Configuring Contus Vblog!

After successful activation, the configuration settings for Contus Vblog will appear under "Settings" tab.

Click on "Contu Vblog" to configure settings.
